**PERSPECTIVES** by Elizabeth Menke

Two infrastructure-related deals were announced this week. Luxor Technologies, the Argo and Valour seed-funded developer of scanning, verification, and reporting tools for lending, mining, and collections systems, acquired OrdinalHub. OrdinalHub provides tools to buy, sell and track Bitcoin-based NFTs.

Leading Ethereum software company ConsenSys acquired HAL, a no-code blockchain developing platform. With this acquisition, ConsenSys' Web3 API provider, Infura, adds to its developer stack more than 40 APIs for on-chain listening. Signals accessible to developers through the transaction will allow them to create alerts and notifications at the protocol level. HAL has automated workflow tools across email, Discord, Slack, Telegram, and Twitter, including those for digital asset trading, DAO governance, and blockchain compliance.
